It is only to be regretted that we know so little of the history of the life and development of these beings, for we refuse to characterize some forms as animal on the sole ground that we do not find in them that movement which is the property of animal nature.

NEW SPECIES OF FROG FOUND IN AMBER.

The 'Annales des Sciences Naturelles' for June mentions, as a palæontological curiosity, a Frog contained in a fragment of yellow amber, and preserving all its external characters, in the possession of the Baron Bulow Rieth, of Stettin; and certainly not inclosed by artificial means, as it differs specifically from all frogs now existing. M. Schmidt thinks it nearest to *Rana temporaria* in the colour of the skin and spots on the legs.
